Product info

Leptotes bicolor (literally meaning 'two colored') is found in Brazil and Paraguay, at an altitude ranging from 700 - 1100 m. In this area moderate temperatures prevail (16-20 degrees at night). The fragrant, white-pink flowers of Leptotes bicolor grow to a diameter of 4 - 5 cm, which is relatively big for a miniature orchid. The flowers open subsequently and yield seeds with a vanilla like taste. In South-America these seeds are used for flavoring milk and ice cream.

Height:

5 cm

Width:

5 cm

Adult height:

40 cm

Adult width:

10 cm

Flower period:

all year

Product:

plant

Natural habitat:

North-East Asia

Altitude range:

0-1000 m

Plantcare

Leptotes bicolor grows on tree trunks in the wild so it prefers to grow in half shadow. The dark place should not be too moist, that can cause the delicate roots of the orchid to rot. If the soil tends to be too moist it is wise to tie the plant up to cork or fern root. A high humidity is recommended, this can be achieved by growing Leptotes bicolor in close proximity to sphagnum (a kind of moss). Provide a moderately cool temperature (16-20 degrees Celsius at night). At the end of winter and the beginning of spring the mildly fragrant flowers appear. After blossoming of the flowers make sure to water the plant less frequently.

Care:
easy

Place:
indoor

Place:
artificial lighting

Light:
no direct sun

Light:
semi sun

Fertilize:
medium

Maintenance:
can be pruned

Watering:
normal

Watering tips:
not standing in water

Air humidity at day:
60-90%

Air humidity at night:
70-90%

Air movement:
large

Temperature max:
30 °C

Temperature min:
15 °C

Soil ph:
< 6-7>

Soil type:
mixed

Repotting:
after 1 year
