flowering plant

Growth habit:

normal

Properties:

limited

Growth rate:

normal

Araflora info:

hybrid

Altitude range:

0-1000 m

## Plantcare

The Phalaenopsis orchid requires lots of light, but should be kept out of direct sunlight. This also goes for the Phalaenopsis x 'Yellow dragons'. The ambient temperature is easy to manage for this plant; everything between 15 and 30 degrees Celsius is fine. This makes it one of the best orchids to keep in your living room. It doesn't require much water, only about once a week. The water should not stay in the plant for too long, otherwise it will affect the roots negatively. A tip from Araflora: water the plant when this orchid's roots are grey. Upon being watered the roots will turn green in an hour, which is a good sign.
