

Tropical pitcher plant 'Nepenthes x hookeriana' 'Dark' (CarniNepenthes x hookeriana 'Dark');

€ 31.61

This is a common, natural hybrid of *Nepenthes rafflesiana* and *Nepenthes ampullaria*. It has pitchers with small openings and wide edges that give it an almost spherical shape. This special variety has patches on its pitchers that are darker than usual.

Plant type:

carnivorous

Place:

indoor

Adult width:

Light:

no direct sun

Watering:

high

Araflora info

Product info

Nepenthes x hookeriana may grow to a height of several metres. It can be grown in a hanging basket or a free-standing pot, but in either case the pitchers must have sufficient space. In such conditions, the plant will grow at a normal rate. When it blooms, *Nepenthes x hookeriana* 'Dark' will produce a cluster of yellowish brown flowers

Height:

15 cm

Natural habitat:

South-East Asia

Altitude range:

100-1500,

Plantcare

Nepenthes x hookeriana requires plenty of sunlight, but not full sun or it will become dehydrated. The best temperature is between 15 and 25 degrees Celsius, certainly no lower than 10 degrees Celsius or higher than 30 degrees. The plant needs plenty of rainwater or distilled water and a well-drained pot. It also needs spraying regularly with water so the pitchers retain water. Nepenthes x hookeriana needs a relatively high level of humidity, thrives in neutral to slightly acidic peat and requires feeding. It can be pruned if it becomes too big.

Care:
easy

Place:
indoor

Light:
no direct sun

Light:
full light

Artificial light height:
10-40cm

Fertilize:
none

Maintenance:
can be pruned

Watering:
high

Watering tips:
free draining mixture

Watering tips:
water spraying

Air humidity at day:
60-100%

Air humidity at night:
80-100%

Air movement:
normal

Day temperature
20°C

Night temperature
10°C

Temperature max:
30°C

Soil type:
peat

Repotting:
after 2 years
