

Bladderwort 'Utricularia flaccida' (Carniutr61)

Utricularia flaccida

€ 7.20

Like many other species of bladderwort, this carnivore is found in Brazil, where it catches prey with special traps close to the ground. Utricularia flaccida doesn't need much attention, so it will be ideal for the novice bladderwort cultivator. The leaves of this special plant are small and similar to moss. Utricularia flaccida blossoms with multiple yellow flowers simultaneously from green stems.

Product info

Brazil is the only country where this species is found. Utricularia flaccida grows there on the swampy ground, hidden beneath the green foliage of the tropical rainforest. The flowers have are bright yellow, almost like a highlighter. The shape is also interesting, as it looks like the flower of an orchid. They grow from long, thin, green flower stems which protrude from the foliage. The traps which Utricularia flaccida uses to catch its side dishes are found under its small sword shaped leaves.

Height:

3 cm

Width:

4 cm

Adult height:

5-10 cm

Adult width:

10 cm

Natural habitat:

North America

Altitude range:

0-500 m

Plantcare

Utricularia flaccida is a good choice if you're not very experienced in keeping bladderwort. It needs a temperature around 25°C. It doesn't need a very high humidity, so it can easily be kept on your windowsill in a warm spot. It needs a lot of light, but should be kept out of direct sunlight. The use of rainwater or distilled water is preferred, with which you should flood the substrate every now and then. A mixture of peat moss and perlite or pumice makes an ideal substrate. You can find this and other components in our ?Plant Accessories? section.

Care:
normal

Place:
artificial lighting

Artificial light height:
0-20cm

Maintenance:
prune dead stalks

Watering tips:
standing in water

Air humidity at day:
60-100%

Air movement:
normal

Day temperature
15-25°C

Temperature max:
30°C

Soil type:
peat

Place:
indoor

Light:
full light
