

Sundew *Drosera capensis* (CarniDr17)

Drosera capensis

€ 4.95

The *Drosera capensis* (Cape sundew) is one of the best known and easiest South African carnivorous plants to keep. This exotic plant grows quite quickly and is very effective at catching insects. *Drosera capensis* rolls its upstanding elongated sticky leaves to catch the insect. This *Drosera* can grow well in a terrarium, on the windowsill, or even in the garden.

carnivorous

Place:

indoor

Adult width:

10 cm

Light:

full light

Watering:

high

Araflora info

introduction

Product info

The Cape sundew has quite a unique appearance. It has a wreath of round leaves from which stems grow, with sticky red flytraps. These traps are elongated and have red tentacles on their tips with a glittering drop of glue-like substance. When an insect comes into contact with the sticky substance, it will not be able to escape. In the summer, *Drosera capensis* grows beautiful flowers with a purple colour. The Cape sundew comes from the Cape in South Africa, hence the name. Araflora sells several variations of sundew plants from temperate zones, take a look at the other sundew species on the website.

Natural habitat:

South Africa

Altitude range:

0-500 m

Plantcare

The Cape sundew is a strong carnivorous plant that is easy to care for. Both in the garden and in the home, *Drosera capensis* can thrive. A sunny, moist spot is best for this plant. Give the Cape sundew sufficient water, preferably soft water or rainwater, because these types of water contain less calcium and nutrients. Added plant nutrients are not necessary. The soil should be slightly acidic. Araflora uses pure peat for this plant, but a mix of sand and peat is also suitable.
