<b>Properties:</b> non-edible		<b>Growth rate:</b> normal	
<b>Araflora info:</b> botanical		<b>Natural habitat:</b> South America	
<b>Altitude range:</b> 500-1500 m			

## Plantcare

The *Aechmea gamosepala* plants like to be no more than 20 cm from the light. When the *Aechmea gamosepala* has finished blooming the flower can be cut away and the bromeliad will grow a new cup by itself. Old and dead parts of the cup can simply be snipped off. It is important to pour water into the bromeliad cup from the top in order to always have water in it. To prevent rot, the roots should not be kept continuously in moisture. A proper water-permeable soil is thus of great importance. Coarse peat, fern roots or dried sphagnum with perlite are all very suitable soils.

Care: easy		Place: indoor	
Place: container plant		Place: artificial lighting	
Light: full light		Light: semi sun	
Artificial light height: 20-40 cm		Protection: water spraying	
Fertilize: little		Maintenance: prune dead stalks	
Watering: normal		Watering tips: free draining mixture	
Watering tips: watering from above		Watering tips: not standing in water	
Soil type: terrarium		Air humidity at day: 50-80%	
Air humidity at night: 80-100%		Air movement: normal	
Temperature <15°C		Day temperature 15-25°C	
Night temperature 10-20°C		Temperature max: 30°C	
Temperature min: 10°C		Soil ph: < 5-6 >	
Soil type: peat/perlite		Repotting: after 1 year
