Product info

The tropical plant Pilea involucrata is a special sight to see due to the color and shape of the leaves. The leaves have an oblong shape and a bright green border. The center of the plant is a purple-like dark green and the two colors are strongly contrasted. The leaves have a wrinkled structure. Pilea involucrata grows easily in a pot or a terrarium and remains low. In a terrarium it offers shelter to reptile and amphibians, increases humidity and provides the air with oxygen. The symbols below will give you some indications for this plant.

Plantcare

Pilea involucrata 'Silver' likes a bright spot, but must absolutely be kept out of direct sunlight. If the plant is kept in a terrarium, *Pilea involucrata* likes it moist, optionally with some artificial light. Make sure this plant's soil is always a little moist. Standing water at the roots is bad for this plants, as it causes the roots to rot. *Pilea involucrata* isn't picky about soil types; a normal potting soil which lets moisture through easily is fine. Adding some plant nutrition to the water once every month promotes the growth. The plantcare symbols below will give you some more indication about the product care.
