

## Aglaomorpha brooksii (Fern04)

Aglaomorpha brooksii

€ 39.48

Aglaomorpha brooksii is large polypod fern with striking green fronds and spores on the underside not covered by a membrane. These ferns are popular houseplants because of their decorative foliage. Aglaomorpha brooksii is extremely easy to cultivate and a strong candidate for a terrarium, provided its leaves are trimmed from time to time.

Plant type:

terrarium

Place:

indoor

Adult width:

40 cm

Light:

semi sun

Watering:

normal

Araflora info

limited

### Product info

Aglaomorpha brooksii is a member of the Polypodiaceae family of ferns. In its natural environment, it grows on trees or the floor of the South American tropical rain forest. A mature plant can grow to a height of 1 metre and be 40 centimetres wide. Aglaomorpha brooksii retains its attractive green fronds all year round. It is not affected by the seasons or changing temperatures.

Height:

10 cm

Width:

70 cm

Adult height:

100 cm

Adult width:

40 cm

Flower colour:

none

Flower period:

all year

Temperature winter:

5 °C

Product:

plant

Plant type:

terrarium

Growth habit:

creeping

Properties:

special

Growth rate:

normal

Araflora info:

limited

Natural habitat:

South America

Altitude range:

0-1000 m

## Plantcare

Aglaomorpha brooksii should be placed in half sun or artificial light. It needs plenty of water, preferably from above, and also needs to be sprayed regularly with water. It is essential to ensure effective drainage by growing it in a light soil mixture and a pot that drains well. Generally speaking, ferns do not suffer from pests or diseases. However, if you suspect a problem, simply remove the affected leaf. In most cases this will resolve the problem and the plant's other leaves will not be affected. Aglaomorpha brooksii needs feeding from time to time to ensure that its leaves maintain their healthy appearance.
