

Fimbriated fern 'Asplenium nidus' (Fern08)

Asplenium nidus 'Fimbriatum';

€ 9.81

Asplenium nidus 'Fimbriatum' is a bird's nest fern with deep and irregularly shaped fronds, quite unlike those of a typical fern. It is indigenous to the forests of Japan. Clusters of spores form on the undersides of its mature fronds.

Product info

Asplenium nidus 'Fimbriatum' is a striking and unusual fern that grows in the shape of a goblet. Its bright-green, deeply segmented and often crinkled leaves make it an eye-catching feature of a room or a cool conservatory. This fern likes plenty of light but must be kept away from direct sunlight. It is a dramatic addition to a contemporary room where green plants are once again a fashionable feature.

Height: 10 cm		Width: 5 cm	
Adult height: 100 cm		Adult width: 40 cm	
Flower colour: none		Flower period: all year	
Temperature winter: 5 °C		Product: plant	
Plant type: terrarium		Growth habit: creeping	
Properties: special		Growth rate: normal	
Araflora info: limited		Natural habitat: South America	
Altitude range: 0-1000 m			

Plantcare

The potting compost must be kept moist but never excessively wet. The slender fronds may acquire brown edges in a space with a low level of humidity. To produce the required level of humidity, simply place the plant's pot on an inverted dish on top of a second dish containing water. As the water evaporates it will create additional humidity. In general ferns do not require much extra feeding.

Care:
easy

Place:
indoor

Place:
artificial lighting

Light:
semi sun
