

Species of foot fern ‰Davallia bullata‰ (Fern16)

Davallia bullata

€ 16.77

Davallia bullata is a house plant with attractive dark green leaves and hairy dark brown rhizomes (horizontal roots) resembling the hooves of a deer, hence ‐Deer's foot fern'. Davalia bullata is a must for any lover of exotic plants. It is characterised by shiny triangular fronds and distinctive root stalks. It is suitable for a windowsill or a terrarium with plenty of light and circulating air.

Product info

Davallia bullata is a member of the Davalliaceae family of ferns and is closely associated with Polypodiaceae. Originally it comes from the tropical and sub-tropical regions of Asia, Australia, Africa and the Pacific. It is epiphytic, that is to say in its natural environment it grows mainly on trees. A mature plant can grow to a height of 15 ‐ 20 centimetres with a similar width.

Height:

10 cm

Width:

5 cm

Adult height:

100 cm

Adult width:

40 cm

Flower colour:

none

Flower period:

all year

Temperature winter:

5 °C

Product:

plant

Plant type:

terrarium

Growth habit:

creeping

Properties:

special

Growth rate:

normal

Natural habitat:

South America

Altitude range:

0-1000 m

Plantcare

Davallia bullata is easy to cultivate in a pot or basket and prefers to be in partial shade. It needs regular watering and spraying but care must be taken not to over water it. It needs a light and airy potting medium and a pot or basket with good drainage allowing excess water to drain away easily.
