Product info

The Araflora Begonia package ara consist of three phenomenal species. One carries pink colored leaves encircled with a deep purple edge. Another lilac foliage with dark purple vines. The latter is predominantly white contrasted by a green hearth and outer rim. When the plants bloom they will form appealing white/pink flowers. When the Begonia's grow into maturity the number of flowers increases until over ten at a time. The plants send to are of a convenient size, so they are suitable for the limited-sized terraria.

Plantcare

Begonia's need abundant light, but should be kept away from direct sunlight. Make sure the temperature stays within the limits of 10°C to 30°C. Ideally this remains between 20°C and 22°C. During daytime the humidity has to balance around 70% and in the night it should rise slightly. Rewater the plants as soon as the top layer of the soil has dried. Be aware the Begonia's never dry out, although they have the reputation to be quite resilient. We recommend putting moss around the base of the stem to retain moist. Fertilizer can be given twice a month to increase the rate of growth. A mixture of peat and perlite will help to retain moist, while draining excess water. We offer this, next to other attributes in our section 'plant accessories'. If the plant happen to grow to big, it is possible to prune them. Establish a continuous air flow in your terrarium to keep infections and diseases from getting a grip on the plants.
