

## Hoya lanceolata ssp bella (Antp42)

Hoya lanceolata ssp bella

€ 22.00

Hoya lanceolata ssp. bella is one the most popular Hoya's for beginners and collectors alike, and for a good reason. The semi-succulent is capable of growing fast and will flower profusely throughout the year. This exotic species is a perfect start for your Hoya collection!

Plant type:

plant

Place:

indoor

Adult width:

80 cm

Light:

full light

Watering:

normal

Araflora info

non-edible

### Product info

This beautiful plant is best grown as a hanging plant, and is a native of the Himalayas. The species' name 'lanceolata' refers to its small, lance-like leaves. The plant will flower throughout the year with an abundance of white-pink flowers, which grow in clusters or 'peduncles'. In the evening these flowers will emit a mild perfume-like scent.

Height:

15 cm

Width:

8 cm

Adult height:

< 5 cm

Adult width:

80 cm

Flower colour:

purple

Flower period:

all year

Product:

plant

Plant type:

plant

Plant type:

terrarium

Growth habit:

creeping

Growth habit:

epiphytical

Growth rate:

slow

Araflora info:

non-edible

Araflora info:

limited

Natural habitat:

South-East Asia

Altitude range:

500-1000 m

## Plantcare

This houseplant prefer to grow in a bright room with plenty of indirect sunlight. A windowsill facing the east or west would be excellent. Try to avoid direct sunlight during the afternoon, as this could damage the leaves. Because this species is originally from the foothills of the Himalayas, it won't mind a little bit of cold. This is one of the Hoya's that would do particularly well in a cool and bright attic. This easy to grow houseplant will appreciate higher levels of humidity (around 70%), but won't mind drier air. Hoya bella is not too picky about temperature and will do fine with room temperatures ranging between 10°C and 30°C. It prefers a coarse, well-draining soil mix, such as a combination of (orchid) bark, perlite and a regular peat-based soil. Although this species is a moisture loving Hoya, it is still very susceptible to root rot if its roots are standing in water. Make sure the soil is almost dried out before watering again. This Hoya is particularly suited to grow in a self-watering container.
