

Peperomia bangroana (Pepe74)

Peperomia bangroana

€ 15.26

This special creeping plant is native to tropical Africa. Peperomia bangroana is popular with terrarium owners because it can grow on all kinds of different surfaces. For example, the plant does well on bark and stone. Its bright green leaves can be found on the red stems. Peperomia bangroana is ideal if you are looking for a plant that can cover the duller areas in your terrarium.

Product info

This creeping plant is found in Tanzania, Malawi, South Africa and the Comoros. Peperomia bangroana is a very tender looking plant. The plant does not grow larger than 40 cm and resembles a succulent because the leaves are somewhat rubbery and thickened. These leaves grow on a red stem with the same properties. As with other Peperomia species, the flowers sit on a kind of cone. They are green-red on the Peperomia bangroana.

0-1000 m

Plantcare

Peperomia bangroana prefers partial shade as too much sunlight can cause the plant to dry out. Or keep the plant in a terrarium under artificial light. Room temperature with high humidity is optimal for this species. Drafts can damage the leaves. Peperomia bangroana is fairly susceptible to root rot, so make sure that the soil can dry by half before watering again. Use a mix of light plant soil and perlite as a substrate. During the period that Peperomia bangroana is growing, you can feed it with plant fertilizer at half strength. It is possible to prune this plant.
