non-edible

Product info

There are many different kinds of Venus flytraps. *Dionaea muscipula* 'Bold' is an exception cultivar? a cultivated variety produced through selective breeding. Venus flytraps are originally from North America where they grow in boggy conditions and sunny locations. In the summer months, their leaf stalks grow longer in order to capture as much sunlight as possible. In autumn and spring, their leaf stalks grow at a more leisurely pace.

Height:

6 cm

Width:

5 cm

Adult height:

5-10 cm

Adult width:

10 cm

Flower colour:

white

Flower period:

Jan-July

Temperature winter:

5°C

Product:

plant

Plant type:

carnivorous

Growth habit:

normal

Properties:

new

Growth rate:

slow

non-edible

Araflora info:

introduction

Plantcare

Plants need to be kept moist with rainwater, boiled water or demineralised water. Hard water full of minerals such as calcium is unsuitable as it may cause root rot. Venus flytraps do not need feeding as they obtain nutrients from the prey they catch.

Care:
normal

Place:
indoor

Place:
container plant

Place:
artificial lighting

Light:
full light

Artificial light height:
0-20cm

Fertilize:
none

Maintenance:
prune dead stalks
