It is a species from tropical Africa, therefore needs a high humidity and temperature. Partly due to its average size, this Begonia scapigera is an ideal plant to add character to your terrarium.

Height: 6 cm		Width: 5 cm	
Flower colour: violet		Flower period: all year	
Product: plant		Plant type: flowering plant	
Plant type: terrarium		Growth habit: normal	
Properties: non-edible		Growth rate: normal	
Araflora info: mini		Araflora info: new	
Natural habitat: Central America		Altitude range: 0-1500 m	

## Plantcare

Begonia scapigera is quite easy to care for. It's an ideal terrarium plant because it needs a high humidity and temperatures between 15°C and 35°C . Under an artificial light, it should be in a semi-bright place. Keep out of direct sunlight in summer. Water the plant with lukewarm water when the top layer of soil has become dry. In humid terrariums this can be limited to only a few times a year! Good air ventilation is important. This ensures that diseases and infections have less chance of getting a grip on the plant. You can use a mixture of perlite and another fibrous material such as coconut as a substrate. Water must be able to drain well at all times. Give Begonia scapigera normal plant food once every two weeks if you are not keeping the plant in a terrarium.

Care:  
easy

Place:  
indoor

Light:  
semi sun
