Product info

The Euphorbia gorgonis is a so-called 'Medusa head' Euphorbia, which means that the plant produces shoots from the top of the tuber, making it look like snakes are coming from the plant. Hence the name gorgonis of the Latin Gorgon, because Medusa was a gorgon.

Height: 6 cm		Width: 8 cm	
Adult height: 100 cm		Adult width: 40 cm	
Flower period: all year		Temperature winter: 5 °C	
Product: plant		Plant type: foliage plant	
Growth habit: climbing		Properties: special	
Growth rate: normal		Araflora info: limited	
Natural habitat: South America		Altitude range: 0-1000 m	

Plantcare

This plant is easy to keep, it requires a well-draining, very airy soil and a spot in full sun. The Euphorbia gorgonis grows slowly and can stay in the same pot for 2 years. Water the plant regularly during the growing season, but make sure that water does not remain in the pot. In the winter, the Euphorbia should remain practically dry, but never let it dry out completely. As with all euphorbias, be careful of the white, latex-like toxic sap that comes out of the Euphorbia gorgonis when it is damaged.

Care:
easy

Place:
indoor

Place:
container plant

Light:
full light

Light:
semi sun

Fertilize:
medium

Maintenance:
can be pruned

Watering:
normal

Watering tips:
not standing in water

Air humidity at day:
60-90%

Air humidity at night:
70-90%

Air movement:
normal

Temperature max:
35 °C

Temperature min:
5 °C

Soil ph:
< 6-7 >

Soil type:
mixed

Repotting:
after 1 year
