

Begonia salaziensis 'Starter' (Begonia111a)

Begonia salaziensis 'Starter'

€ 0.00

If you are looking for a begonia that does well in a warm place in the living room, Begonia salaziensis is a good choice. The plant is native to Madagascar and the neighboring island of Réunion. This species grows in shrub form and can grow up to a meter. The leaf of Begonia salaziensis, like many other related species, has an asymmetrical shape. In addition, this variety produces beautiful fine white flowers.

Product info

Begonia salaziensis is a tropical species indigenous to Madagascar and Réunion Islands. The plant often grows there on trees and other large shrubs to find support for its stem. The leaves are uniform in color and have deeper veins. The flowers of Begonia salaziensis differ somewhat from those of many other begonias. The stamens are in a circle instead of in a bundle. The white petals are also fleshier than average.

Height:

6 cm

Width:

5 cm

Flower colour:

violet

Flower period:

all year

Product:

plant

Plant type:

flowering plant

Plant type:

terrarium

Growth habit:

normal

Properties:

non-edible

Growth rate:

normal

Araflora info:

Natural habitat:

Central America

Altitude range:

0-1500 m

Plantcare

Begonia salaziensis is fairly easy to care for. Avoid direct sunlight in the summer, keep temperature between 20°C and 24°C, and the humidity between 70% -80%. Mist the plant regularly if the humidity is lower. Water, using lukewarm water, when the top layer of the soil starts to dry. A mix of peat with perlite is a suitable substrate to prevent wet soil. You can find this and other growing supplies under the 'plant accessories' section. Fertilize the Begonia salaziensis twice a month. You can prune the plant when it becomes too large.
