Product info

Philodendron brandtianum 'starter' is a climbing species that is native to countries like Peru, Brazil, Bolivia and Ecuador. Philodendron brandtianum 'starter' is also nicknamed as the silver leaf Philodendron due to its beautiful colouration. Philodendron brandtianum 'starter' can be kept as climber with giving it some support, but it can also be kept equally easily as a hanging plant in a basket. A nice feature of Philodendrons is that they can act as air purifiers. Araflora does advise to keep Philodendron brandtianum 'starter' at a place out of harm's way because Philodendrons are toxic when ingested.

Height:
8 cm

Width:
5 cm

Adult height:
>100 cm

Adult width:
<70 cm

Flower colour:
red

Flower period:
all year

Product:
plant

Plant type:
foliage plant

Growth habit:
normal

Properties:
non-edible

Growth rate:
slow

Araflora info:
giant

Araflora info:
no shipping

Natural habitat:
South America

Altitude range:

0-1500 m

Plantcare

Philodendron brandtianum 'starter' thrives with bright but indirect sunlight. Its is best placed at a east- north-facing window. Philodendron brandtianum 'starter' tolerates low and high light levels pretty well as long as it is indirect light, but too much direct light can scorch the leaves. The optimum day temperature for Philodendron brandtianum 'starter' is from 20°C to 25°C, during the night time it is advised to keep the temperature above 12°C. However, the plant tolerates a rather broad range of temperatures from 10°C to 35°C. Araflora provides Philodendron brandtianum 'starter' with a well-draining and nutrient rich soil. The soil should be kept moist but not drenched otherwise root rot can occur. Watering can be done when the topsoil, when you put half a finger in the soil, is dry to touch. During the warmer months this mostly means watering can be done around three times a week and during the colder months it will be once a week. A humidity level between 50%-60% is sufficient, a good humidity level will stimulate growth and increase the foliage of the plant. During spring and summer Araflora advises to fertilize Philodendron brandtianum 'starter' with a water soluble regular houseplant fertilizer diluted to half its strength, once every month. If needed, mostly every two to three years, Araflora advises to repot the plant during the growing season.

Care:
very easy

Place:
container plant

Light:
no direct sun

Fertilize:
little

Watering:
normal

Watering tips:
not standing in water

Air humidity at night:
60-80%

Day temperature
10-30 °C

Temperature max:
30 °C

Soil ph:
< 5-8>

Repotting:
after 2 years

Place:
indoor

Place:
artificial lighting

Light:
semi sun

Maintenance:
can be pruned

Watering tips:
free draining mixture

Air humidity at day:
60-80%

Temperature
< 15 °C

Night temperature
12-18 °C

Temperature min:
15 °C

Soil type:
peat
