non-edible

Product info

Araflora is bringing a limited set of 10 unidentified Hoya cuttings discovered in the forests of northern Vietnam. The leaves vary in size and shape, they all resemble the leaves of Hoya carnosa in a way (thick, succulent, deep green leaves with beautiful splash). This is the first time these plant are offered for sale and the flowers are unknown up to now.

creeping

Growth habit:
epiphytical

Growth rate:
slow

Araflora info:
non-edible

Araflora info:
limited

Natural habitat:
South-East Asia

Altitude range:
500-1000 m

Plantcare

The plants seem to be very easy to cultivate. These tropical epiphytes will probably grow best with bright indirect light in a fast draining soil mixture. Due to the succulent nature of the leaves the plants do not require a lot of water and can go a while without water. Only water the plants when the substrate has dried out completely. Never leave the roots sitting in water. These unidentified Hoyas do not require very high humidity or temperature and will do fine in most living room conditions.

Care:
easy

Place:
indoor

Place:
artificial lighting

Light:
full light

Light:
semi sun

Artificial light height:
20-40 cm

Fertilize:
little

Maintenance:
can be pruned
