Natural habitat:

South America

Altitude range:

500-1000 m

Plantcare

The Philodendron micans is a very easy indoor plant that thrives in a sun filled room. It's better not to put the micans in direct sunlight because it may cause the leaves to get a slightly bleached look. The best method to check if the plant needs water is to check if the first few centimeters of the soil feel dry. This will probably amount in the micans needing water around once a week. In colder months once every two weeks will be enough. It wouldn't hurt to sprinkle some water on its leaves a few times a week to stay on top of the humidity your Philodendron needs.

Care: normal		Place: indoor	
Place: artificial lighting		Light: no direct sun	
Light: semi sun		Artificial light height: 20-40 cm	
Fertilize: little		Air humidity at day: 20-40%	
Air humidity at night: 80-100%		Temperature < 15 °C	
Day temperature 10-30 °C		Night temperature 12-18 °C	
Temperature max: 35 °C		Temperature min: 15 °C	
Soil type: peat
