

## Aglaonema pumilum 'M' (Botho235b)

Aglaonema pumilum 'M';

€ 45.00

Aglaonema pumilum is a rare, compact growing evergreen perennial with a strikingly coloured foliage. With its thick structured leaves that can be very light green to intense dark green of colour with intriguing silver spots on them as well, the plant is a real eyecatcher and therefore a must-have for every plant lover according to Araflora.

Plant type:

plant

Place:

indoor

Adult width:

75 cm

Light:

full light

Watering:

normal

Araflora info

non-edible

### Product info

Aglaonema pumilum is native to the tropics of Burma and Thailand. Aglaonema pumilum is a rather rare plant from the Aglaonema genus, therefore Araflora is proud to be able to sell this plant. Aglaonema pumilum was already first described in 1893 by a man called Joseph Dalton Hooker and even earlier it was already collected for the first time in a hilly region in India, called the Lushai Hills in 1827. Aglaonema is derived from two Greek words that can be translated as bright and thread, they refer to the leaf colour and to the stamens. The leaves of Aglaonema pumilum are very tough of structure and feel almost kind of leathery. The leaves have a nice dark green to light green colour and with fairly large silver flecks on them. Aglaonema pumilum is not a fast growing plant it will stay rather compact in size.

Height:  
8 cm

Width:  
6 cm

Adult height:  
100 cm

Adult width:  
75 cm

Flower colour:  
red

Flower period:  
all year

Product:  
plant

Plant type:  
plant

Plant type:  
antplant

Growth habit:  
creeping

Growth habit:  
epiphytical

Growth rate:  
fast

Araflora info:

non-edible

Natural habitat:  
South-East Asia

Araflora info:  
special

Altitude range:  
0-500 m

## Plantcare

Aglaonema pumilum thrives with temperatures of around 20°C -25°C, during winter time it is important to keep the temperature above 16°C -18°C. Otherwise chilling damage might occur. Maybe even more important is to keep a stable temperature regime during the growth of the plant. Araflora uses a well-aerated and well-draining soil for Aglaonema pumilum. During the growing season, spring and summer, Aglaonema pumilum can be watered thoroughly after it is checked that the top soil is dry to touch. The watering frequency and amount can be decreased during the colder months. Araflora advises to provide the plant with some regular organic houseplant fertilizer bi-weekly from March to August. Araflora advises to place the plant in a spot with bright but filtered sunlight in order to keep the beautiful colouration of the leaves. Aglaonema pumilum is a tropical plant and therefore it will like to be misted on a regular basis, multiple times a week during the growing season but decrease the frequency a bit during the colder months.

Care: normal		Place: indoor	
Place: artificial lighting		Light: full light	
Light: semi sun		Artificial light height: 20-40 cm	
Fertilize: little		Maintenance: can be pruned	
Watering: normal		Watering tips: free draining mixture	
Watering tips: not standing in water		Watering tips: water spraying	
Soil type: antplant		Air humidity at day: 60-80%	
Air humidity at night: 80-100%		Air movement: normal	
Temperature < 15 °C		Day temperature 20-30 °C	
Night temperature 12-18 °C		Temperature max: 35 °C	
Temperature min: 10 °C		Soil ph: < 6-7 >	
Soil type: peat/cocos		Repotting: after 2 years
