

Begonia pustulata (Begonia157)

Begonia pustulata

€ 24.00

This rare, botanical Begonia pustulata is a species that is originally from Mexico. In its natural habitat the pustulata has a trailing growth habit, but indoors it works perfectly as a hanging plant. This is a fast-growing plant which can be easily propagated. So, it won't be a problem to gift a cutting of this unique plant to your family and friends!

Product info

The Begonia pustulata is a unique, fast growing indoorplant which has to be repotted quite often. The species is originally from Mexico where, because of its trailing growth habit, it can easily form into a low bush. Don't worry if you don't have the space for a full-on Begonia bush in your house, as this plant works perfectly as a hanging plant! The silvery leaves have a somewhat spiky texture to them and have beautiful white markings in and around the veins.

Natural habitat:

Central America

Altitude range:

0-1500 m

Plantcare

The soil of this plant has to be kept moist, but make sure you don't overwater it as that can cause the root to rot. It would be best to soil to slight dry between watering is. Be careful when watering on the leaves as they can be easily damaged. The Begonia pustulata does well in bright indoor areas, but make sure not to place it in direct sunlight.
