Natural habitat:
South America

Altitude range:
0-1000 m

Plantcare

Paphiophedilum delenatii requires a slightly shaded spot out of full sun. In summer, an average daily temperature of around 26°C and a 75% humidity is suggested. A well-draining, airy orchid soil of bark and peat moss is recommended as potting soil. Water regularly, but allow the soil to dry out between waterings. Feed orchid food in a low concentration every two weeks and occasionally flush the soil to remove excess salts. During the winter rest period during give little water and no food. We recommend repotting the plant in new soil after flowering, when the formation of new roots starts again, making sure to put the plant in the ground at the same height as it was before.

Care:
easy

Place:
indoor

Place:
artificial lighting

Light:
no direct sun

Light:
semi sun

Fertilize:
medium

Maintenance:
can be pruned

Watering:
normal

Watering tips:
not standing in water

Air humidity at day:
60-90%

Air humidity at night:
70-90%

Air movement:
No-air movement
