

Rhaphidophora tetrasperma 'M' (Ariods61)

Rhaphidophora tetrasperma 'M'

€ 15.75

The tropical Rhaphidophora tetrasperma is mainly grown for its very special deep finger-shaped leaves. Rhaphidophora tetrasperma is easy to care for and in contrast to many other foliage plants, also fits in a somewhat smaller terrarium. Rhaphidophora tetrasperma comes from the arum family.

Plant type:

foliage plant

Place:

indoor

Adult width:

<50 cm

Light:

no direct sun

Watering:

normal

Product info

Rhaphidophora tetrasperma is a tropical species found in Thailand and Malaysia. This very fast growing species can reach a height of several meters if supported. The flowers of Rhaphidophora tetrasperma rarely form and are not very conspicuous. This plant is ideal if you want to fill a dark corner of the room quickly.

Height:

30 cm

Width:

15 cm

Natural habitat:

South America

Altitude range:

500-1000 m

Plantcare

Rhaphidophora tetrasperma is very easy to care for. It is an ideal houseplant for places with partial shade, no drafts and temperatures above 15°C. Water with lukewarm rainwater after allowing the soil to dry slightly before you water again. Don't allow water to remain in the pot as this can cause diseases and infections to the roots. Do this by mixing the soil with a small amount of perlite. Use normal potting soil as a substrate for Rhaphidophora tetrasperma. In the summer, fertilize once a month at half strength to promote growth. In winter reduce this to once every two months. Rhaphidophora tetrasperma can be sensitive to over-fertilization. Cut old leaves from the plant.
