

Sundew 'Drosera sessilifolia' (CarniDr71)

Drosera sessilifolia

€ 0.00

Drosera sessilifolia is a South American sundew, which is very similar to *Drosera burmannii*. The leaves obtain a more red colour depending on the stage of maturity. *Drosera sessilifolia* likes a warm and humid climate and is therefore most suitable for a sunny windowsill or in a terrarium with artificial lighting.

Plant type:

carnivorous

Place:

indoor

Adult width:

10 cm

Light:

full light

Watering:

high

Araflora info

introduction

Product info

Drosera sessilifolia is a South American sundew that is endemic to regions like Brazil, Guyana and Venezuela. The sundew is very similar to *Drosera burmannii* and is genetically related to the kind that is found only in Asia and Australia. This taxonomic connection gives *Drosera sessilifolia* the same triangular, rounded leaves that grow in a small compact rosette shape. Here one can spot the so-called snap-tentacles, with which *Drosera sessilifolia* can catapult a prey into its trapping leaf. The leaves can obtain a more red colour depending the stage of maturity it has reached

Height:

3 cm

Width:

4 cm

Adult height:

5-10 cm
